

November 16<sup>th</sup> falls on a Saturday, this Amendment can be filed on Monday, November 18, 2002), is being filed concurrently.

Amendments to the claims are presented herein by presenting a complete set of pending claims, as amended, in clean form. Also, an Appendix entitled "Version With Markings to Show Changes Made," showing the current amendments to the claims is attached hereto.

**IN THE CLAIMS:**

Please replace the previous version of the claims with the following clean version, wherein claims 42, 47, 50, and 54 incorporate new amendments thereto, no claims have been cancelled, and no claims have been added.

Sub D  
cont  
C1

42. (Once Amended) A camera comprising:  
a camera body;  
a first memory, installed inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;  
a second memory, installed inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;  
a reproduction device, installed inside the camera body, to selectively receive and reproduce image information recorded on one of the first memory and the second memory;  
and  
a changer for selectively changing between a first condition, in which image information on the first memory is outputted to the reproduction device, and a second condition, in which image information on the second memory is outputted to the reproduction device.

43. A camera according to claim 42, wherein the first memory is detachably mountable to the camera body.

44. A camera according to claim 42, which further comprises a finder for finding a camera subject.

45. A camera according to claim 42, wherein the second memory is fixedly provided inside the camera body.

46. A camera according to claim 42, which further comprises a button for advancing image information to be reproduced by the reproduction device among the plurality of photographic frames.

Cont

47. (Once Amended) A camera capable of supporting a first memory and a second memory, the camera comprising:  
a camera body;

a first connection electrically connectable to a first recording medium, mounted inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;

a second connection electrically connectable to a second recording medium, mounted inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;

a reproduction device, installed in the camera body, to selectively reproduce image information stored on one of the first recording medium and the second recording medium; and

a changer to selectively change between a first condition, in which the reproduction device and the first connection are placed in communication, and a second condition, in which the reproduction device and the second connection are placed in communication.

48. A camera according to claim 47, further comprising a finder for finding a camera subject.

49. A camera according to claim 47, further comprising a button for advancing image information to be reproduced by the reproduction device among the plurality of photographic frames.

50. (Once Amended) A camera comprising:  
a camera body;  
a first memory capable of storing image information corresponding to at least two photographic frames;  
a second memory;  
a reproduction device to selectively receive and reproduce image information recorded on one of the first memory and the second memory;  
an internal memory for temporarily storing image information; and  
a changer for selectively changing between a first condition, in which image information on the first memory is outputted to the reproduction device, via the internal

*no end*

memory so that the image information recorded on the first memory is reproduced as an image by the reproduction device, and a second condition, in which image information on the second memory is outputted to the reproduction device via the internal memory so that the image information recorded on the second memory is reproduced as an image by the reproduction device.

---

*DI with*

51. A camera according to claim 50, wherein the first memory is detachably mountable to the camera body.

52. A camera according to claim 50, further comprising a finder for finding a camera subject.

53. A camera according to claim 50, wherein the second memory is fixedly provided inside the camera body.

---

*ef*

54. (Once Amended) A camera capable of supporting a first memory and a second memory, the camera comprising:

- a camera body;
- a first connection electrically connectable to a first recording medium capable of storing image information corresponding to a plurality of photographic frames;
- a second connection electrically connectable to a second recording medium;
- a reproduction device to selectively reproduce image information stored on one of the first recording medium and the second recording medium;
- an internal memory for temporarily storing image information; and
- a changer to selectively change between a first condition, in which the reproduction device and the first connection are placed in communication via the internal memory so that the image information recorded on the first recording medium is reproduced as an image by the reproduction device, and a second condition, in which the reproduction device and the second connection are placed in communication via the internal memory so that the image information recorded on the second recording medium is reproduced as an image by the reproduction device.
